

INSURANCE IS CONFUSING, but it doesn't have to be.

Insurance has always been confusing, especially when it comes to eye care. It's possible you may have a Vision Plan in addition to your Medical Insurance.

We accept 2 types of benefits:	 VISION PLANS	 MEDICAL INSURANCE
Routine eye examination for glasses or contacts.		
-Pain -Loss of Vision -Dry Eye (other medical conditions)		

How are they different?

- **Vision Plans** cover one annual routine eye exam for glasses or contact lenses.
- **Medical Insurances** cover examinations to diagnose and manage eye disease.

During the routine examination the doctor will screen for eye disease. If further testing or follow up is required to diagnose or treat any ocular disease, a follow up visit will be made and the medical insurance will be utilized at the next visit.

We will also utilize your medical insurance when returning for a follow up visit to manage or monitor a medical condition. Unlike vision plans, medical insurance will cover multiple visits throughout the year when they are medically justified.

If you have both Medical and Vision benefits, our office will work to determine your appropriate out-of-pocket costs.

Ask your clinician how your exam will be billed today.
